

Quiet libraries help minds focus.
Healthy air helps patients heal.
Comfortable resorts keep guests coming back.
The right temperature helps teams perform.

The first step is knowing what matters most to your building.

The next step is LMS.

HVAC SERVICE

LMS is at your “service” with the intent to provide significant energy savings over time. Our skilled technicians have the know-how to diagnose, problem-solve, and maintain all major systems in brands across heating, cooling, air quality, controls, and more.

In the business of creating comfortable energy-efficient indoor spaces.

WE CREATE COMFORT.

INDOOR AIR QUALITY

We all want to breathe clean air. Indoor pollution sources that carry and release gases or particles into the air are the primary cause of indoor air quality problems. LMS’ integrated advanced solutions improve air quality and help you and your occupants breathe with peace of mind.

Whether you’re installing new equipment, maintaining an existing system, or completely upgrading the infrastructure, LMS can provide the equipment, resources, and expertise in HVAC, boilers, controls, air quality, and energy management.

Buildings should support the people inside. The occupant experience impacts virtually every outcome and success of the building.

HVAC EQUIPMENT

We offer building automation across a wide range of HVAC equipment manufacturers and design applications. They are engineered to be user-friendly and to help building owners efficiently achieve their desired temperature, humidity, and ventilation. Our systems integration approach incorporates fully open BACnet-compliant controls in accordance with ASHRAE Std. 135.

INTEGRATED CONTROLS

Sustainability = carefully aligning both environmental and economic objectives.

BOILER SERVICES

Maintaining your boiler and its system components will significantly extend the life of your equipment and ensure effective energy usage, while providing comfort for your occupants.

ENERGY SERVICES

We help you understand how energy is affecting your organization. Our “virtual technician” delivers actionable outcomes based on the operational data collected from your building systems. This insight defines a path to addressing the issues that matter most and the action to take to improve comfort, increase performance, reduce energy use, maximize the risk of failure, and save money.

HVAC PARTS & SUPPLIES

The right part can make all the difference, but knowledgeable advice? Now, that’s golden. For half a century, LMS has been selling parts and helping customers get the most from their systems by carrying a wide range of products from a variety of manufacturers.
